mcavatar Documentation

Release latest

Sep 15, 2021

CONTENTS

Welcome to the official documentations of McAvatar. McAvatar is a minecraft skin asset tool used in python.

Why use McAvatar over others?

- McAvatar is very lightweight, you won't need to worry about any kind of storage.

- McAvatar is blazing fast. It offers instantaneous speeds so you won't have to worry about lag.

- McAvatar is open-source, there is no weird stuff hidden in the code so you can relax.

ONE

QUICKSTART

First, install mcavatar by entering this command in your root directories terminal.

`pip install git+https://github.com/parsel-l/mcavatar.git`

Second, import mcavatar. `import mcavatar`

You are already done with all settings!

Here is an example code of mcavatar.

```python
# Imports the best minecraft skin asset library.
import mcavatar

# Warning! You have to know the basics of python to use this library!
userInput = input("Input Username Here: ")

# We will use the uuid function of mcavatar and print the inputed UUID here.
uuid = mcavatar.uuid(userInput)
print(uuid)
```
